

# Global Monitoring App: Content and Features

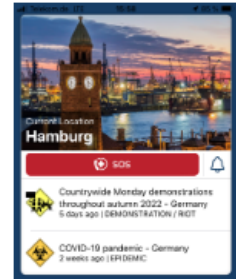

This article contains a description of the content and features of the Global Monitoring App for you and your travellers.

## 1. Current Location

By activating your location services, the Global Monitoring App can detect your current location.

The app shows you events relevant to your location in an understandable way.

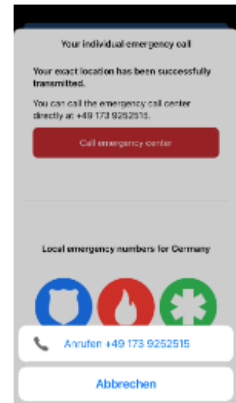

By clicking on the bell, you can activate or deactivate background location services and email notifications.

## 2. SOS-Button

If you find yourself in an emergency situation, you can quickly and easily press the red SOS button. This will show you the local emergency numbers for the country you are in.

If your company uses A3M Assistance Services, you have the option to contact your SOS provider (the medical and/or security assistance provider) directly. In order to initiate a call, you share your location. This enables your SOS provider to identify you and provide you with the best possible support in accordance with the service agreement.

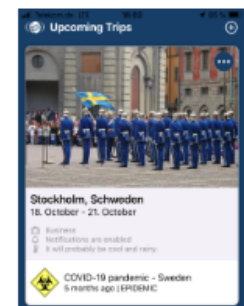

## 3. Upcoming Trips

Click on the "+" icon to add your upcoming trips. Enter your destination and travel dates, select the type of trip (business or private), and activate or change the push and/or email notifications at any time by clicking on the three points in the corner, under which you can also delete the trip.

After you have clicked on "Save", the trip you have just created including the relevant events will be displayed.

Depending on the licence agreement, the A3M Country Information and the COVID-19 entry requirements will also be displayed.

## 4. Watchlist

The Watchlist allows you to subscribe to **countries and/or event categories that are relevant to you**. This way we can always keep you up to date – via push and/or email notifications.

To add a country or an event category to your watchlist, click on the "+" symbol. After you have selected the countries and/or event categories relevant to you, they will be added automatically.

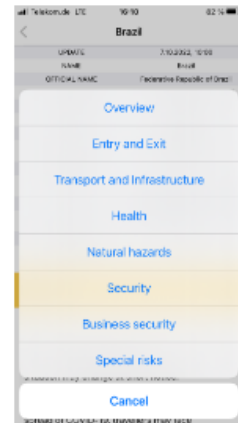

By clicking on the bell or on the three points in the corner, you can select the notification type and delete the country or event category.

## 5. Country Information

Depending on your licence agreement, you have the option of accessing the **A3M Country Information** directly. In order to do so, click on "Country Information" and select the country for which you would like to obtain information.

The division into individual chapters makes it easier for you to get an overview and quickly find the information you are looking for.

## 6. World Map

Would you like to get an **overview of all events worldwide**? Then use the World Map. All events are displayed there, both in a map overview as well as in a clear list.
